#### A PARAPHRASE OF REMARKS BY LOBSANG RAMPA

In giving this paraphrase I allude to the subject of matter and anti-matter as has been evinced many times in scientific endeavor. Lobsang Rampa begins by illustrating the power failure on the eastern seaboard. He describes in the beginning that somewhere a short circuit occurred. He describes it as a sudden coming together of the positive and the negative. As a result, much of the eastern seaboard was blacked out. Then he says, all because "positive electricity wanted to meet negative electricity suddenly, violently, without being tamed and controlled by first having to work. For when opposites meet, uncontrolled, anything can happen and does!"

He says for centuries past, the Adepts of the Far East have known that there was an opposite world to this -- the world which in the Far East is referred to as "the black twin." He refers to the fact that in 1927 a British physicist discovered that there was such a thing as a world of anti-matter, but he doubted his own work and said nothing. Then he went on to name Carl Anderson who photographed cosmic rays passing through a special chamber and found traces of an electron different from other electrons, finding in fact that there were anti-electrons and for his discovery, he was granted the Nobel Prize. He says that it has been clear to the people of the East for centuries that a hydrogen atom and its anti-matter counterpart could make an explosion which by comparison would make the standard modern atom bomb as ineffectual as a damp squib.

He describes life as the existence of motion, flow, rise, fall, wax and wane. That even sight consists of motion, for the rods and cones of the eye merely respond to vibrations or motion from the circle which he says many of us have seen. There is nothing that is stationary. All is merely a mass of molecules dancing up and down, circling around each other like midges on a summer night. On a larger scale he compares it to the cosmos where there are planets, worlds, meteors all circling around, all in constant motion, where nothing is still. He compares humans to batteries that must have a negative and a positive pole before energy can flow. He points out that all existence has negative and positive components and as a result, there is a constant flow of energy one to the other. Without this, life would be impossible.

Again, he says the world of matter has an equal and opposite, that is, anti-matter. He says that soon the cycle of existence will change and we will be controlled by a consciousness of beneficent influence operating the energy fields between the poles. Presently we are an alternating current system which changes from positive to negative and negative to positive, just as our counterpart changes from negative to positive and positive to negative. He repeats that life is flow, movement, vibration, oscillation, change. All existence is flow and change.

If we examine the alternating current system, we can see that each half-wave consists of a negative cycle becoming half-positive and a half-positive cycle becoming half-negative. But when they go on and instead of becoming half-negative, the first becomes wholly negative and the second wholly positive. In the Western world we are accustomed to this frequency changing fifty

to sixty times a second. He says the world and the solar system as well as the universe has a cycle system of its own, that we travel along the stream of time just as electrons travel along the electric stream and that our conception of time is not fully known until we reach the understanding of the over-self.

He points out that one different time cycle is 72,000 years, but here on this planet we have a counterpart of opposite polarity, another galaxy in another system of time all together. Obviously that system cannot come close to us or there would be a total destruction of our planet and many other worlds as well. He styles our present world as being in a negative cycle, which is coming to a close and that soon a fresh cycle will start in which conditions will become more and more positive, where we shall no longer find destructive world conditions.

He adds as a postscript that our present propulsion systems for rockets is crude to the utmost because a small amount of anti-matter under proper control would provide complete anti-gravity matter. He says the world is the form of a magnet with magnetic fields which radiate from the Arctic and the Antarctic but connected by a bridge that we cannot see is another world of opposite polarity. He ends his exegesis by saying that it takes an occultist to understand this subject because his out-of-the-body experience leads him out of the Earth as well and thus he sees what the other world is like and points out that he and thousands of others have done so very frequently.

Again, he says anti-people are merely people whose etheric direction is different from that of people on this, the world of Earth. They may surely, by way of illustration, have a yellowish and blue shell to the aura instead of a blue and yellowish shell, as here. If you find it difficult to visualize this other world of anti-matter, he uses the illustration of photography using a light shining through the negative under sensitized paper, showing a reversal of the light patch versus the dark patch. This he claims completely explains the whole problem surrounding the broad field of psychic phenomena that find multitudinous activations. Much of this is merely a "slip through" into another dimension or into the world of anti-matter.

In conclusion, it is indicated that these Hindu beliefs and faiths of thousands of years ago might possibly have produced the foundation for some of the things that Dr. Einstein produced as the theory of relativity in which he considered time as a sense, as a form of perception, a passing of a unit from one point to another without the passing of time.

I have alluded to this previously but I think here is a possible line of investigation that could prove a basic breakthrough that would explain thousands of other items falling within the realm of altered states of consciousness.
